

# Reduce Revenue Leakage

## Improve clinical reimbursement accuracy and enhance patient care with Miya Revenue and Reimbursement Manager

Delivering the highest quality care whilst being correctly compensated for it is no easy task for Private Hospitals. Limited access to patient data makes it difficult to understand and document patient complexity, a determining factor in health fund reimbursement.

### Miya Revenue and Reimbursement Manager maximises your existing data sources using artificial intelligence and machine learning to:

- > Reduce revenue leakage
- > Increase clinical coding effectiveness
- > Minimise gaps in clinical documentation
- > Improve patient safety
- > Maximise clinical staff efficiency

### Drive efficiencies in clinical documentation

Complexity detection algorithms use AI to identify conditions from patient data to provide real-time data to Visiting Medical Officers (VMOs) to confirm conditions via the Miya Ward Round App without impacting their schedule. This mobile application provides live patient information to a smartphone or tablet which a VMO or other member of staff can read, understand and confirm underlying patient complexity and update diagnosis or treatment as it happens.

### An enhanced level of patient care

Miya Revenue and Reimbursement Manager allows a Private Hospital to deliver a higher standard of patient care by surfacing the individual complexity of each patient. This information allows the hospital to automate best practice treatment, to plan and manage resources, and reduce waiting times; all of which minimise the risk of adverse events taking place.

### Reduce revenue leakage and the risk of claw back

Capture the end to end patient treatment lifecycle and link to billing processes to reduce revenue queries and claw backs. VMOs can confirm conditions daily and in real-time, using the Ward Round App which documents significant issues as they happen thereby reducing coding queries and creating a comprehensive audit trail.

### Why Miya Revenue and Reimbursement Manager?

- > An Enterprise Health Informatics Platform.
- > Integrate and leverage clinical data.
- > Real-time metrics including user configurable dashboards.
- > Detect and monitor risk and safety in real time.
- > Predict patient level risks and flow using AI.
- > Specialty specific views on mobile devices.

By leveraging Miya Revenue and Reimbursement Manager workflows, artificial intelligence and integration capability, Private Hospitals can accurately document and bill patients in real-time, to ensure appropriate reimbursement is received for the clinical services delivered.
